

University of Central Missouri

August 15, 2009

The University of Central Missouri took delivery of an Xwind crosswind trainer just a few days ago. They plan to lower the student's cost of learning to fly by boosting crosswind landing skill on the ground without risking airplanes and burning fuel.

They also took delivery of two Redbird full motion simulators located in the same hangar. They will fly entire missions on the ground before going to the airplane.

UCM is growing fast with airport improvements, fleet upgrades, and simulator additions.
